Abril Miranda Villa Márquez

SOFTWARE ENGINEERING STUDENT

Torreón, Coahuila, Mexico
mirandavilla341@gmail.com | abrilvilla.dev
github.com/abrilvillita | LinkedIn | Devpost

Software engineering student building deployed web products, real-time systems and data-driven interfaces. Hands-on experience with Java, JavaScript, Python, SQL, APIs and cloud integrations. Interested in reliable software, user-centered product development and collaborative engineering.

EDUCATION

Universidad Tecmilenio - Software Development Engineering
2025 - present | Third semester | Expected graduation: 2029 (estimated)
Academic average: 98.33/100 | 35% academic scholarship

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL, HTML, CSS
Web & data: React, FastAPI, Flask, REST APIs, WebSockets, PostgreSQL, Supabase, SQLite
Engineering: object-oriented programming, data structures, Git/GitHub, Linux, Red Hat Enterprise Linux
Cloud & integrations: Cloudflare Workers, authentication, Mercado Pago, transactional email

SELECTED PROJECTS

TextHuman | Deployed web product

- Developed and deployed a writing platform integrating authentication, PostgreSQL, payment workflows, transactional email and AI APIs through Cloudflare Workers.
- Configured the custom domain and DNS; built document-import and account flows, and iterated on functionality for users and paying customers.

Argus AI | Python, FastAPI, WebSockets, SQLite

- Built a hackathon prototype that streams simulated IoT telemetry to a live dashboard and flags anomalies using EWMA z-scores and online Mahalanobis distance.
- Implemented configurable rule evaluation and response logging; packaged the application with Docker and a Render deployment configuration.

TRAZA FIT - SHIFT | React, TypeScript | In development

- Developed a work-integrated learning interface with career pathways, guided activities and evidence collection for the Tecmilenio SHIFT team challenge.
- Built a separate content-management workspace and bilingual interface flows; worked within a team-based competition.

SmartLibrary | Java, NetBeans, Swing

- Created a library-management application using object-oriented programming, role-based access, CRUD operations, loans, returns, history and statistics.

Additional project: cleaned 3,636 sales records, engineered variables and evaluated multiple linear regression using R^2, MSE and RMSE in Python/Google Colab.

LANGUAGES & SELECTED LEARNING

Spanish: native | English: EF SET C2 Proficient
Red Hat System Administration I (RH124) | Oracle Academy: Java Fundamentals
Cisco Networking Academy: Introduction to Data Science
